Chariguard Common Investment Funds

Background and Objective

Chariguard UK Equity Fund has the objective of tracking the FTSE All-Share Index. The Fund fully replicates its benchmark index, holding all constituent stocks and thus provides the maximum diversification combined with the lowest possible tracking error.

Chariguard Overseas Equity Fund has the objective of tracking the FTSE World Indices (ex UK) aggregated according to the overseas breakdown of the WM Charities Universe. In this way the Fund provides its clients with a diversified overseas asset mix which is appropriate for the charities market.

Chariguard Fixed Interest Fund is a conventional fixed income fund investing in Gilts. The Fund generally seeks to avoid Gilts that are significantly above par in order not to prejudice future capital value at the expense of current income.

Investment Rationale

There are two main types of investment for charity portfolios – segregated management and pooled funds such as Common Investment Funds. Chariguard Common Investment Funds enable charities to benefit from: cost effective diversification; dividends paid gross of recoverable tax, thus removing the need to reclaim tax; a reduction in the Charity's administration burdens compared to a segregated portfolio – especially in view of the Charity SORP requirements, since the need to monitor transactions is reduced. Regulated by the Charity Commission and the responsibility of a segregated Corporate Trustee.
